

Nothing left but results.

Certain environments can be very challenging. A complex mixture of high levels of contamination with very specific restrictions on water or material exposure can make effective cleaning difficult.

Within the food, chemical or metal industries using high-pressure water or compound can pose **contamination** or **safety risks**. It can also lead to **damage** to machinery as well. You end up cleaning up after the blasting is complete.

In the textile and graphic industries, it can be even more challenging to get effective cleaning results without causing yourself more problems.

So, what do you do?

All the results, none of the problems.

Dry-ice blasting is ideal for these environments and many others. The treatment is **unique** in that it results in no left-over compound or water when the job is done.

Using the latest in dry-ice blasting machines, our experienced Squad will blast the surface clean without any by-product, contamination or risk to the surrounding environment. That makes dry-ice blasting perfect for use in public areas or those in which you need to take special care.

This type of blasting is **highly versatile** and can be used to great effect in many **different environments** including:

- *Industrial cleaning*
- *Chemical factories*
- *Food production plants*
- *Historic monument care*
- *Cleaning rubber & plastic*
- *Deep cleans in the metal industry*
- *Looking after graphic facilities*
- *Textile plants*

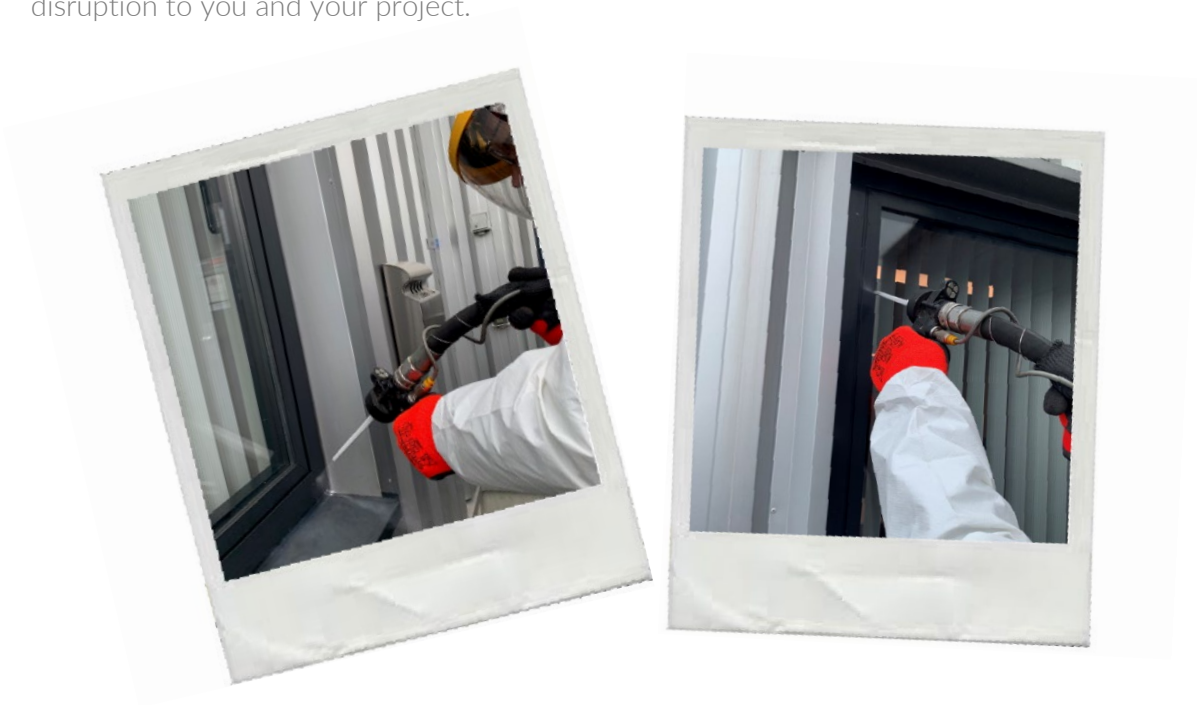

Whichever location you're taking care of, this dry-ice will do the job and
not cause more problems for you.

We give the best by being the best.

NeroQom ensures the best results by only using the most up-to-date and effective technology. That's true of everything we do, and dry-ice blasting is no exception.

Our cutting-edge technology uses the latest methods to get the best results. Dry-ice blasting works by using compressed air to blast CO₂ pellets on to the surface which is to be cleaned. Cooled to -78 °C, these pellets sublimate from solid to gas as soon as they hit. This results in an amazing, deep clean but with nothing but natural, CO₂ gas as a by-product of the treatment.

You can be assured that every member of the Squad who uses this treatment is a **trained, experienced professional**. They'll get you the best result quickly and with the minimum of disruption to you and your project.

More than just cold air.

We offer a comprehensive range of blasting services beyond dry-ice. Using a large range of machines, compounds and methods, we've got an answer for every issue.

Beyond blasting, NeroQom has a comprehensive range of Disciplines which cover every aspect of high-end maintenance for any project.
