

Not a memory you want.

Removing graffiti is a science. Whichever surface you're working on, a balance must be found between effective removal of the problem and not damaging the surface.

If you've tried to walk this line, you may have found that, once removal is complete, you're left with shadows. A **ghost image** of the graffiti that you've removed, still in place and plain to see.

Not only does this ruin the visual comfort of your project, but it encourages further attacks.

So, what do you do?

Apply further removal treatment and risk damaging your surface?

Or leave the shadow in place?

Neither is ideal, but what if there was a third option?

The right answer.

NeroQom has the solution. Our Graffiti Shadow Remover is specially formulated to deal with all types of shadow or ghosting left behind by graffiti removal. This product is designed to **remove the traces** which other products leave, first time, every time.

Our treatment is both effective and quick, before you know it all evidence of the attack will be gone. Your surface will be as good as **new**.
