

Why do you need NeroQom during construction?

The construction of any project is a busy time. There's a lot going on, all of which takes your time and attention.

With **budgets** and **deadlines**, you're working hard to deliver your client's dream and your designer's vision. But with all these things on your mind, plus your team, suppliers and much more besides, it's the **details** which get missed.

NeroQom can be your eyes and ears to take care of all the details. In doing so, we'll save you both **time** and **money** to make your client and boss that much happier.

What can NeroQom do for your project?

NeroQom has nearly 100 different Disciplines which we can use to prevent or resolve visual comfort issues which would normally end up on your snag list.

We've been working with partners in construction for a long time, so we know what you need. Some of the Disciplines which are most commonly deployed include:

- *Temporary Protection*
- *Control & Correction*
- *Defect Registration*
- *Cleaning, restoring and protecting before handover*
- *Minimising snag lists*

Each of these will help you meet all your commitments and reduce exploitation delays. We have proven **experience** of working on any material you may be using and the expertise to deliver accessibility solutions where needed.

Temporary Protect.

If you're planning to work in an area which has already had parts finished or that includes fragile materials, temporary protection is a **must**.

By apply one of our protection solutions, you can ensure that any work you complete won't result in damage to existing surfaces. Then, when you're done, it's **quick and easy** to remove the temporary protection.

Control & Correction.

If you're getting close to exploitation or have concerns about contamination on your project, this is for you. The Squad will visit your site, **documenting** any damage they find before completing restorative action.

Once we're done, we'll send you a **report** of everything we worked on as well as any areas which may be a cause for concern in the future.

This is perfect for a pre-exploitation clean before the client sees any issues for the snag list.

Defect Registration.

If you need a full **evaluation** and **report** of the condition of your project, you need this Discipline. Using the latest software, we will evaluate the visual condition of your project in detail.

We then produce a comprehensive report which we will present to you with a discussion of options and remedial actions which can be taken.

Handover check-up.

If you know what needs to be done, we're happy to work from your snag list and get things **fixed**. Just give us the detail of what needs to be done and we'll dispatch the Squad to work through and resolve them all.

We'll even work with your own **software platform** to resolve and provide feedback on issues as they're resolved. That way you can watch your snag list disappear in real-time!

Which surfaces do NeroQom work on?

That's a long, complicated and ever-expanding answer. Our Discipline Menu covers all the materials, techniques and options we offer our clients.

If you'd like to see the latest version,
