

## Material Techniques

### Our Material Technique Disciplines cover every part of your building or superyacht.

From the structural to the decorative, we'll take care of it and extend the lifecycle whilst helping you control your maintenance costs.

#### #100 NeroQom® Anodised Aluminium:

One of the most beautiful materials we see and one of the most easily damaged, even within the construction phase. Just remember that without the right care, you run the risk of needing to recoat or even fully replace your surface. Where others might use aggressive, even strongly acidic or alkaline, products, professionals always use pH-neutral, emulsifying products for cleaning and molecular tension protection. That's why these are all you'll find in our Discipline Menu:

##### #100-1 NeroQom® Ano Clean Pro

*Our pH-neutral, emulsifying deep cleaners will restore the appearance of your anodised aluminium from even the heaviest contamination. Leaves a temporary protection on application.*

##### #100-2 NeroQom® Ano Pre-clean

*A deep clean which can be used ahead of our protection Disciplines or on its own. We use a pH-neutral, emulsifying deep cleaner to clean or prepare the anodised aluminium.*

##### #110-1 NeroQom® Ano Semi-Permanent Protect

*Restore visibly degraded anodised aluminium to look like new. Whilst adding a semi-permanent molecular tension protection which penetrates the substrate to resist a wide range of contamination and degradation.*

##### #110-2 NeroQom® Ano Temporary Protect

*Our short-term solution for anodised aluminium. This will improve the look of your surface whilst also creating temporary protection against aggressive contamination. Ano Temporary Protect is ideal for use in construction as it's perfect for minimising the impact of concrete contaminated water and much more besides.*

#### #200 NeroQom® Coated Surfaces:

Always stunning, the range of coatings available makes choosing the right one for your new build project a joy. Your decision will deliver a coated surface with a unique character including its colour, intensity, gloss-rate, hardness, thickness, metallic coatings and structure, the finished design will be truly yours. But, if your coated surface is subject to neglect or the wrong treatments, these can be ruined. We see this a lot when others carelessly spray on aggressive cleaning products or plaster the surface with poorly applied wax with a fancy name. Other issues are caused when cleaners don't understand the negative impact of their products on surrounding materials or the environmental impact of their process water. All so easily avoided if you choose a maintenance partner who follows the manufacturer's O&M, has a proven track record, understands the surface, substrate and can interpret the material's status. They also need a range of solutions to hand, we all know that one treatment doesn't work for everything. Pick your partner with care and you'll keep your vision alive by retaining the character of your coated surfaces for years to come. That's where we come in.

##### #200-1 NeroQom® Coated Surface Clean Pro

*Coated surfaces can be very sensitive. We use our pH-neutral, emulsifying deep cleaners to restore the appearance of your coated surface from even the heaviest contamination.*

##### #210-1 NeroQom® Coated Surface Restore Protect

*Coated Restore Protect brings back the character of your coated surface. We start by removing dead paint then priming the surface. Once complete the colour, gloss-rate and hardness will be restored whilst maintaining the other details of finish and condition.*

##### #210-2 NeroQom® Coated Surface Restore Protect Pro

*Restore the original colour, gloss-rate and hardness of your coated surface whilst maintaining the finish and condition. We'll remove the dead paint before adding NeroQom Molecular Tension Technology which will leave a durable protection within the surface.*

# NeroQom®

## **#220-1 NeroQom® Coated Surface Upgrade Protect**

*Upgrade your coated surfaces ideal from the very beginning and make it easy to clean as you do it with our Molecular Tension Technology. Coated Upgrade Protect will retain the quality of any colour, gloss-rate, hardness, thickness, metallic finish and structure for years to come.*

## **#400 NeroQom® Glass:**

From prestigious buildings to superyachts, glass delivers the finest views. But that's not the only reason glass is such a popular material; it's also cheap to maintain and the maintenance is fairly straight forward. But only if you do it right. If you don't, your view degrades and, in the end, the whole material will be ruined. When this starts, you'll lose transparency, scratches build up, limescale appears and contamination spreads. When you're maintaining your glass, it's not just about one objective. The impact of a treatment is often beyond what you'd think; removing scratches can create distortion, easy clean protection can discolour glass, leave oily stains or can even act as a glue for contamination. The surrounding materials can also be victims if they're not considered, your project is more than glass. To get the right results, your maintenance partner needs to understand glass. They need a full, deep understanding. If you want to know what that looks like, check out our Glass Disciplines.

### **#400-1 NeroQom® Glass Film Application**

*Change the character of your glass with a self-adhesive film. We can add safety, UV protection, decorative design, security and much more.*

### **#400-2 NeroQom® Glass Protect Shield**

*The best protective nano coating to increase the strength, safety and performance levels of your glass.*

### **#400-3 NeroQom® Glass Upgrade Protect**

*Give your glass a nano upgrade with our NeroQom® Molecular Tension Technology to make your glass easy to clean and give it lasting protection.*

### **#400-4 NeroQom® Glass Repair**

*Effective repair of chips using transparent or coloured resin.*

### **#400-5 NeroQom® Glass Restore**

*Designed for the heaviest contamination on any type of glass, our pH-neutral emulsifying deep cleaners will make it like new again.*

### **#400-6 NeroQom® Glass Restore Etched & Sandblasted**

*Using our active cleaner, we can remove the heaviest contamination from within the structure of your glass.*

### **#400-7 NeroQom® Glass Scratch Removal Large Area**

*The most effective solution for removing scratches or pits of any size and depth over a wide area on glass.*

### **#400-8 NeroQom® Glass Scratch Removal Precise Area**

*Effectively remove small numbers of scratches of any size or depth from your surface, including shaped glass.*

## **#500 NeroQom® Polyplast:**

Polyplast is cheap to buy and easy to work with, it's a common material. But if neglected, it can ruin your first impression. Although simple to look after, this is only true if you do it right, if not, you'll see your maintenance costs spiral and your polyplast turn ugly.

Many others use aggressive products to clean it, but that quickly compromises the integrity of the material and results in expensive restoration or repair. Some even apply protective layers which can't bind to the surface and simply fall away.

Any professional knows, what you need is pH-neutral products, applied with care, to keep your polyplast looking superb and protect it for the future. That's why those are the only products you'll find in our Disciplines.

### **#500-1 NeroQom® Polyplast Restore Protect**

*By using our pH-neutral emulsifying system we will restore the appearance of your polyplast and provide temporary protection.*

# NeroQom®

## **#700 NeroQom® Stainless Steel:**

Stainless steel offers a uniquely modern and sleek impact. Once seen, it leaves an impression which lasts. So, what does this architectural icon take to look after? It's tougher than you'd think. When you see stainless steel in the showroom, it looks amazing. But, when installed at your superyacht or façade, it's easily damaged through corrosion, the wrong type of polishing, cleaning or protection. We've often seen others using abrasive pads, strong acids to clean and oil or silicone based protection which goes on the surface, not in. This will all result in compromised stainless steel. When working on this surface you must be aware of the brushed or polished finish and how the material was made. During cleaning, it's important to retain the surface, not burn the protective layer off. Once that happens your stainless steel becomes vulnerable to corrosion. Professionals know that, as with many other materials, we need to care for the surface, not attack it. Long lasting protection needs to be in the material, not just laying on top. When professionals come, the surface has armour and protection for the future, check out our Disciplines to see how it's done.

### **#700-1 NeroQom® Polished Stainless Steel Restore**

*Our pH-neutral, emulsifying deep cleaners will perfectly remove deep contamination and corrosion from your polished stainless steel.*

### **#700-2 NeroQom® Brushed Stainless Steel Restore**

*Using our innovative techniques and pH-neutral, emulsifying deep cleaners on your brushed stainless steel, we'll take care of deep contamination and corrosion.*

### **#710-1 NeroQom® Polished Stainless Steel Protect**

*Upgrade with our NeroQom Molecular Tension Technology, nano-coating technology system to make your polished stainless steel easy to clean and give it lasting protection.*

### **#710-2 NeroQom® Brushed Stainless Steel Protect**

*By applying our NeroQom Molecular Tension Technology, nano-coating technology system we'll upgrade your brushed stainless steel to give it a clean and lasting protection.*

### **#720-1 NeroQom® Polished Stainless Steel Polishing**

*Restore the flawless surface of your polished stainless steel, no matter how compromised it is.*

### **#720-2 NeroQom® Brushed Stainless Steel Brushing**

*Our Squad will work on your brushed stainless steel to make its surface like new, no matter how damaged it is.*

### **#730-1 NeroQom® Stainless Steel Upgrade Protect**

*Take care of your stainless steel by upgrading it with our anti-corrosion protection.*

## **#800 NeroQom® Stone:**

Stone is a name for many diverse materials, from the majesty of natural stone, the functionality of concrete to the shelter of bricks & masonry, it's a broad term. But whichever form it's in, we love stone. Being uniquely forged from the heart of the earth, each type of stone needs specialist care and the utmost respect. When left, stone will quickly become contaminated and lose all impact. Worse, you run the risk of it becoming damaged or destroyed. Given time, the nature will reclaim even these hardest of materials. But, if you seek the wrong help, you can make matters worse. Tough as stone can be, if you don't treat it with respect, more problems await you. With excessive pressure with a jet wash, the wrong chemicals or too high speed on a machine all being devastating to your surface. Professionals understand each type of stone, how and where it's used, what to use and when to treat it. When you understand the surface, what to do is clear. If you're looking for the perfect balance of understanding, expertise and respect for your stone, you're in the right place. Let us show you how it should be done.

### **#800-1 NeroQom® Stone Algae Clean**

*From light to heavy growth, we can remove most types of algae from your stone and reduce future growth.*

### **#800-2 NeroQom® Stone Fluid Protect**

*NeroQom® Stone Fluid Protect is an innovative, comprehensive and effective system to protect any type of stone. This includes natural stones, concrete, bricks and masonry.*

### **#800-3 NeroQom® Stone Cream Protect**

*Professionally protect your concrete, bricks & masonry with our Cream Protect system which offers unique application options.*

### **#800-4 NeroQom® EcoStone**

*Invisible armour inside your concrete, bricks & masonry which gives self-cleaning properties whilst degrading air pollutants. Protecting your stone and improving the quality of the air we breathe.*

# NeroQom®

## **#810-1 NeroQom® Stone Restore Pro**

*A versatile cleaning, restoration and maintenance solution for concrete and many types of natural stone. We can tailor our solution depending on the type and level of damage or contamination. This Discipline includes polishing, sanding or brushing techniques.*

## **#900 NeroQom® Wood:**

It's one of the oldest building materials and still a very popular one. Bringing the vibrance and warmth of nature into our man-made world. But we all know nature has its own clock, left alone your wood will degrade and begin to breakdown before disintegrating completely. Many just spread a thick layer over it and call it done. Not professionals. We know you have a responsibility to look after wood. It needs oil, varnish or paint. Each type of wood has unique needs and reacts differently, so patience and experience are a must in wood care. When you ask us to take care of your wood, that's exactly what we'll give you and the results will leave you breathless.

## **#900-1 NeroQom® Wood Care Pro**

*Repair, update or just maintain the condition of your wood, including colour and finish, with our range of Disciplines.*
