

Let's make renewable beautiful...

In an increasingly environmentally conscious world, we all need to do our part to protect the future.

Whether you're in architecture, construction or building management you know the benefits of renewable energy. From the cost savings they generate through power consumption to government incentives, the financials are there.

But what about design?

When it comes to **solar panels**, we've all seen them. The boring, standard black rectangles bolted to a roof. *Ugly. Unsightly. Detracting from the visual comfort and value of a property.* And never enough coverage to provide a noticeable amount of power generation.

But what if there was another option?

**Power your world,
enhance your view.**

NeroQom® Solar Façade is a **fully customisable renewable energy generation system** installed on the façade of your building which lets you define how your panels look. We give you complete artistic control to match them to the unique aesthetic, advertising and design needs of your building.

Using the latest in Dutch technical know-how, we can apply colours, texture and gloss-rate directly to our solar panels, changing their look and still delivering amazing performance. Whether you want a logo, pattern, image or design, we can make it happen.

Our custom-made panels can also be created to the size and shape you need, giving you unprecedented flexibility in where you can install them to suit your style and maximise coverage on your building.

You'll love NeroQom® Solar Façade because:

- You choose how it looks, with your **designs** spanning any number of modules
- Solar Façade generates up to 150 Watts of power per m² helping you move to an **energy-neutral** future
- Turn your building into an amazing **advertising opportunity**, either for you or rented to someone else
- Each panel can be a **custom** size or shape defined by your needs
- Every **module** has a lifespan of over **30 years**
- Our **ceramic inks** stay fast for over **50 years**
- **Colours** stay true when viewed from any angle
- **Thin and lightweight**, you can install them almost anywhere
- Adds an extra layer of **protection** to your façade, prolonging the life of the materials

Whether you'd like to retro fit NeroQom® Solar Façade to your existing building or plan them into your design from the drawing board up, the NeroQom Energy can make it happen. Our scalable system is ideal for anywhere including offices, logistics centres, schools and hospitals. Let's grab a coffee and discuss what you have in mind.

Four steps to a better world:

We don't just turn up to install the system, we're with you every step of the way.

Design: *We'll work with you to design a solution you'll love. That includes the look, shape, size, capacity and artwork. Our Squad will ensure each colour is faithfully transferred from your artwork to our solar panels.*

Planning: *It's not as simple as it looks, so we're there to calculate likely energy production, installation planning and return on investment with you. Giving you complete oversight on what you can expect from your NeroQom® Solar Façade.*

Installation: *From the planning to installation of every component of the system on your façade, including the electrical connection, we've got you covered.*

Maintenance: *The long-term effectiveness of NeroQom® Solar Façade relies on the correct, effective maintenance of the panels. We'll be with you for the long-term. We can recommend the best cleaning and protection solutions for your panels, then carry them out for you. Better yet? We have options which are easy to clean making your washes quicker and so ensuring that even the maintenance is eco-friendly!*

We're here for the whole picture. NeroQom is your solar partner to deliver beautiful, effective systems tailored to your exact requirements end-to-end.

Just part of a global picture:

Beyond our Solar Façade, NeroQom offers a full suite of sustainable solutions. Focused on the high-end maintenance of your building or superyacht, our Disciplines have an answer for every material of your building.

If you're ready to reduce your environmental footprint, we've got the Disciplines to make it easy. Check them out here:
