

The Power to Restore.

If you're facing deep contamination or graffiti, it can seem impossible to deal with. Especially if you've tried other cleaning solutions, they can make the problem worse.

With how fragile glass, natural stone and other facade materials can be, the **danger** lies in using a solution which is too aggressive. If you're not careful, you'll irreparably damage the substrate. Then you're into replacement or trying to patch the damage up. Not good.

But how do you balance the power you need to remove the contamination against the fragility of your materials?

You call in NeroQom.

Flexibility through Control.

The NeroQom Sand Blast Discipline offers you the most controlled, considered approach to handling contamination on virtually any surface.

Unlike old machines, our equipment is cutting edge, giving us **complete control** over the rate, pressure and character of the blasting process. We will discuss your needs with you and analyse your surface so that we use the exact character of process to get results.

Our **aim** is always to remove the contamination or graffiti and to leave the substrate untouched.

We do this by controlling every aspect of the treatment including:

- *Pressure*
- *Temperature*
- *Flow rate*
- *Size of abrasive*
- *What the abrasive is made from*
- *Add water or dry ice*

The NeroQom Squad can adjust these as the project progresses.

This lets us treat a range of different materials on your project to the same **high standard**.

Capture and Control.

We understand that, in the past, sand-blasting was a messy business. We've seen it. We know. With the environmental and practical considerations on a modern project, we know that just isn't acceptable any more.

NeroQom uses on the best equipment which, on top of letting us customise applications, has some real benefits to waste and mess. Our machines use **60% less abrasive** during treatment and actively **reduce dust development by 95%**.

This means that you'll get less mess straight away.

If you want to take it one step further, we can also apply Temporary Protection to the surrounding area. These covers and shields will enable us to protect the rest of your project whilst drastically reducing clean up time when the job is done.

Just let us know what you'd like to achieve when we meet, and we'll advise the best solution for your specific needs.

More than Blasting.

NeroQom offers a **world-beating** range of different products and techniques in our Discipline Menu. This unique range includes everything you'd expect from the architects of high-end maintenance and some surprises too.

If you'd like to know more about what we do,

check out the latest Discipline Menu on our website here:
